## Sustainable Procurement Policy

HimaConsult recognizes that its procurement activities have a significant impact on the environment, society, and the economy and accepts that it has a responsibility to carry out its procurement activities in an environmentally and socially responsible manner.

We will strive to incorporate environmental and social considerations into our services, materials and good selection process.

To achieve this, we will:

- Comply with all relevant procurement and environmental legislation;
- Make procurement decisions based on a balance between economic, social and environmental factors;
- Examine the need for the product or service, to avoid unnecessary consumption and manage demand;
- Encourage and persuade suppliers to supply more environmentally friendly products to minimize negative environmental and social effects associated with the products and services they provide;
- Ensure non-discrimination against local and smaller suppliers;
- Consider whole-life cost when making purchasing decision;
- Raise awareness of staff to adopt more sustainable purchasing practices to reduce costs and the environmental impact of goods and services we buy; and
- Encourage staff to review the consumption of goods and materials and adopt best practice (reduce, reuse & recycle) to help minimize environmental impacts;

We will regularly review this Policy and ensure corrective and preventive measures have been taken to ensure continual improvement.
